anti-tumour necrosis acator (TNR) antibody of the invention. The antibodies isolated human, primate, rodent, mammalian, chimeric, humanised and/or complementarity determining region (CDR)-grafted antiburantised and/or complementary used to the antibodies, immunoglobulins, cleavage products and other specified portions and variants, as well as anti-TNR antibody compositions, formulations, devices, transgenic animals, transgenic compositions, formulations, devices, transgenic animals, transgenic plants, and methods of making and using them. The anti-TNR antibody comprises at least a portion of an immunoglobulin molecule, especially the heavy chain and/or light chain variable regions given in AMMS1164 and in the present sequence, or either all of the CDRs of the heavy chain (see AAMS11858-60) or all of the CDRs of the light chain (see AAMS1161-53). The antibody may inhibit TNP-induced cell adhesion molecules, inhibit TNP binding to receptor, or provide Arthritic Index improvement in a mouse model. It is useful for diagnosing or treating a TNP related condition in a cell, tissue, organ or animal (claimed) such as rheumatoid arthritis, gastric ulcer, asthma, allergic rhinitis, Crohn's pathology, sickle cell anaemia, diabetes, a cardiovascular disease such as antiponed cardial infections, pneumonia, leprosy and malaria, a malignant viral, and fungal infections, pneumonia, leprosy and malaria, a malignant callengs. Parkinson's disease, spinal ataxia, Alzheimer's disease and creutzfeldt-Jakob disease, spinal ataxia, Alzheimer's disease and creutzfeldt-Jakob disease.
                                                                                                                                  isolated mammalian anti-tumor necrosis factor antibody, useful for
                                                                                                                                                                                                                                                                                                 The present sequence is that of the light chain variable region of an anti-tumour necrosis factor (TNF) antibody of the invention. The

Cregion encoded by a human germine gene in a transgenic mouse used in human monoclonal antibody (mAb) construction. A GenTMV fusion was performed using spleen cells from a hybrid mouse containing human corrected by a human germine gene in a transgens that was memonic burners and constant region antibody transgenes that was immunised with performed using spleen cells from a hybrid mouse containing human corrected by a single antibody transgenes that was immunised with recombinant human tumoru necrosis factor (TRV) alpha Human mabs were obtained that bound immobilised human TNF alpha with apparently high cotained that bound immobilised human TNF alpha with apparently high avidity. These mAbs had a totally human 1gd1, kappa isotype. The mature correct for the light chain variable region of 2 of the mAbs. TNV14 and portion of the light chain variable region of 2 others, TNV148(B) and TNV196 (see TNV15, were identical (see AAM51174) to the present sequence, while the complementarity determining region (CDR)-grafted anti-TNF antibodies, and cleavage products and variants, as well as anti-TNF antibody compositions, encoding or complementary uncleic acids, vectors, immunoglobulins, and cleavage productes and variants, as well as anti-TNF antibody compositions, of complementary uncleic acids, vectors, cantibody compositions, formulations, devices, transgenic animals, cransgenic plants, and methods of making and using them. The anti-TNF ransgenic plants, and methods of making and using them. The antibodies at least a portion of an immunoglobulin molecule, capped to the present sequence and in AAM51165, or either all of the CDRs of the CDRs of the present sequence and in AAM51165, or either all of the CDRs of the CDRs of the present sequence and in AAM51165, or either all of the CDRs of the CDRs of the present sequence and in AAM51165, or either all of the CDRs of the CDRs of the present in a mouse model. They are useful for diagnosing or treating a rheumatoid arthritis, gastric ulcer, asthm a llergic rhinity or any parth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel isolated mammalian anti-tumor necrosis factor antibody, useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is that of a human Vg/38K-type light chain variable

Also included are the nucleic acids encoding the CDR8, a vector comprising the nucleic acids, a host cell comprising the vector, an anti-idiotype antibody that binds to the antidual integrin, a medical device comprising the antibody suitable for administration by parenteral, subcutaneous, intraabdominal, intracticular, intraticular, intracticular, intracticul
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel isolated mammalian anti-dual integrin antibody, useful for diagnosing or treating dual integrin related condition such as rheumatoid arthritis, gastric ulcer, asthma, atherosclerosis, restenosis.
                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                 9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               portions or variants thereof. Specifically, it refers to an antibody fragment where a protein has been inserted into, or replaces a portion of, one or more CDR regions, such that each CDR mimetibody comprises at least one portion of a heavy chain or light chain variable region, which itself comprises at least one human framework region and at least one ligand binding region (LBR). The present invention describes human mimetibodies, including modified immunoglobulins and cleavage products
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 mimetic; CDR mimetibody; gene therapy; transgenic; immune;

portions or variants thereof. Specifically, it refers to an antibody fragment where a protein has been inserted into, or replaces a portion of or more CDR regions, such that each CDR mimetibody comprises at least one portion of a heavy chain framework region and at least one ligand binding region (LBR). The present invention describes human mimetibodies, including modified immunoglobulins and cleavage products that can be useful in gene therapy and the generation of transgenic plants and animals. Furthermore, the CDR mimetibody is useful for preparing compositions for modulating, treating or reducing the symptoms

```
The invention describes an isolated binding member comprising at least one binding domain capable of specifically binding Streptococcus presentations aurface adhesin A (PsaA) protein, the binding domain having a dissociation constant Kd for PsaA which is less than 1 x10 -6 M. Also described are: an isolated mucleic acid molecule encoding at least a part of the binding member described above; a vector comprising the nucleic acid molecule of (1); a host cell comprising the nucleic of (1); a cell line engineered to express the binding member described above; detecting or diagnosing a disease or disorder associated with phenumococcus in an individual; a kit comprising at least one binding member described above, the antibody being labeled; and a pharmaceutical composition comprising at least one binding member is useful for producing a pharmaceutical composition for the treatment of Pneumococcus infection. The binding member, methods and

Compositions, factor (TMF) human recombinant monoclonal antibodies (mAbs) TWN14 and TWN15. These are human mabs produced from a GenTWV than on TWN15. These are human mabs produced from a GenTWV than on TWN15. These are human mabs produced from a GenTWV and constant region antibody transgenes that was immunised with human TWF alpha with high avidity alpha. The human mabs bind immobilised human TWF alpha with high avidity and have a totally human 1gG1, kappa isotype. The mature portion of the can have a totally human 1gG1, kappa isotype. The mature portion of the and germline sequence (see AAM51175) show a single amino acid difference. If it invention provides human, primate, mammalian, rodent, chimeric, chimanised and/or complementary nucleic acids, vectors, host calls.

The invention provides human, primate, mammalian, rodent, chimeric, thumanised and/or complementary nucleic acids, vectors, host calls.

TR antibodies, immunoglobulins, cleavage products and other specified portions and variants, as well as anti-TWF antibody compositions, formulations, dereshing them. The anti-try antibody compositions, formulations, dereshing and using them. The anti-TWF antibody compositions, formulation of an immunoglobulin molecule, especified plants, and methods of making and using them. The anti-TWF antibody compositions, formulation of an immunoglobulin molecule, especified condition in a call, tissue, organ or animal (claimed) such as created condition in a cell, tissue, organ or animal (claimed) such as the antibodies may inhibit TWF induced cell adhesion molecules, inhibit the mouse model. They are useful for diagnosing or treating a TWF copy sickle cell anaemia diabetes, a cardiovascular disease such as arteriosclerosis, atherosclerosis, restenosis, allergic rhinities, gastric ulcer, asthma, allergic rhinities, copy arcticular, and fungal infactions, permonia, leprosy and malaria, and multiple mycloma, or a neurological disease such as multiple mycloma, or a neurological disease such as and multiple mycloma, or a neur
                                                                                                                    Novel isolated mammalian anti-tumor necrosis factor antibody, useful for treating sickle cell anemia, diabetes, atherosclerosis, restenosis, angina pectoris, myocardial infarction, leprosy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9

tumour necrosis factor (TMF) human recombinant monoclonal antibodies
(mAbs) TNV148(B) and TNV196. These are human mabs produced from a GenTNV
fusion using spleen cells from a hybrid mouse containing human variable
and constant region antibody transgenes that was immunised with human TNF
alpha. The human mabs bind immobilised human TNF alpha with high avidity
and have a totally human IgG1, kappa isotype. The mature portion of the
cand have a totally human IgG1, kappa isotype. The mature portion of the
light chain variable region differs from that of the Vg/38-type light
chain germline sequence (see AAM51173) by a single residue (Tyr-50
replacing Ser). The light chain variable regions of 2 other human mabs
(see AAM51174) were identical to the germline sequence. The invention
provides isolated human, primate, rodent, mammalian, chimeric, humanised
and/or complementarity determining region (CDR)-grafted anti-TNF
andlors immunoglobulins, cleavage products and other specified
portions and variants, as well as anti-TNF antibody compositions,
encoding or complementary nucleic acids, vectors, host cells, compositions, formulations, devices, transgenic animals, transgenic plants, and methods of making and using them. The anti-TNF antibody comprises at least a portion of an immunoglobulin molecule, especially the heavy chain and/or light chain variable regions given in the present sequence and in AAM51165, or either all of the CDRs of the heavy chain (see AAM51158-60) or all of the CDRs of the light chain (see AAM51161present sequence is that of the light chain variable region of anti-The

ö
inhibit TNF binding to receptor, or provide Arthritic Index improvement in a mouse model. They are useful for disagnesing or treating a TNF related condition in a cell, issue, organ or animal (claimed) such as rheumatoid arthritis, gastric ulcer, asthma, allergic rhinitis, Crohn's pathology, sickle cell annemia, diabetes, a cardiovascular disease such as arteriosclerosis, atherosclerosis, restenosis, angina pectoris or myocardial infarction, an infectious disease in a cell such as bacterial, viral, and fungal infectious, pneumonia, leprosy and malaria, a malignant disease such as leukaemia, chronic myelocytic leukaemia, Burkitt's a malignant lymphoma and multiple myeloma, or a neurological disease such as multiple spelvaemia, parkinson's disease, spinal ataxia, Alzheimer's disease and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention provides the protein and coding sequences for human monoclonal antibodies which bind specifically to the HER2/neu growth factor receptor (also known as erbB2). These are designated 3-F2, 1-D2 and 2-B8. They can be used in the immunotherapy-based treatment and prognosis of cancers, particularly adenocarcinomas such as salivary gland, stomach, kidney, mammary gland, lung and squamous cell carcinomas, and ovarian cancer. The present sequence is part of an antibody of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; HER2; neu; erbB2; oncogene; cancer; antibody; immunotherapy; 3-F2;

disease, Hashimoto's thyroiditis), Sjogren's syndrome, pulmonary inflammation (e.g., asthma, chronic obstructive pulmonary disease, pulmonary sarcoidosis, lymphocytic alveolitis), transplant rejection, spinal cord injury, brain injury (e.g., stroke), neurodegenerative diseases (e.g., Alzheimer's disease, Parkinson's disease), gingivitis, gene therapy-induced inflammation, diseases of angiogenesis, inflammatory kidney disease (e.g., IgA nephropathy, membranoproliferative atherosphritis, rapidly progressive glomerulonephritis), or atherosclerosis. It is also useful for treating a viral or bacterial infection involving unwanted IP-10 activity in a subject, where the viral infection is mediated by HIV, HCV, HSV-1 or SARS virus. The present sequence represents the amino acid sequence of a human IP10 monoclonal antibody light chain variable region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes an isolated human antibody (I) that specifically binds osteoprotegerin ligand (OPGI). Also described: (1) a pharmaceutical composition comprising a pharmaceutical carrier and a therapeutic amount of (I); (2) methods of treating an osteopenic disorder in a patient, comprising administering to a patient the pharmaceutical composition of (I) or a pharmaceutical amount of (I); and (3) a method for detecting OPGI in a biological sample, comprising contacting the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                EIVIJTQSPATLSLSPGERATLSCRASQSVSSYLAWYQQKPGQAPRLLIYDASNRATGIPA 60

                          has
sample with (I) under conditions that allow for binding of the antibody to OPGL, and measuring the level of bound antibody in the sample. (I) has osteopathic, antiarthritic and cytostatic activities, and can be used in gene therapy. The composition and methods are useful in diagnosing or treating bone disorders, such as osteoporosis, bone loss from arthritis, baget's disease or osteopenia. The antibody (I) may also be used for detecting OPGL in biological samples and in identifying cells or tissues that produce the protein. The present sequence represents a sequence which is used in the exemplification of the present invention.

English. Claim 16; SEQ ID NO 48; 156pp; The present invention describes an isolated human antibody (1) that specifically binds osteoprotegerin ligand (OPG1). Also described: (1) a pharmaceutical composition comprising a pharmaceutical carrier and a therapeutic amount of (1); (2) methods of treating an osteopenic disorder in a patient, comprising administering to a patient the pharmaceutical composition of (1) and (3) an enthod for detecting OPG1 in a biological sample, comprising contacting the sample with (1) under conditions that allow for binding of the antibody to OPG1, and measuring the level of bound antibody in the sample. (1) has osteopathic, antiarthritic and cytostatic activities, and can be used in gene therapy. The composition and methods are useful in diagnosing or

Human MADs to IL-IR1 were prepared using the HCO7 strain of transgenic mice, which expresses human antibody genes. These mice were immunised with purified recombinant IL-IR1, and splenocytes from immunised mice were fused to a mouse myeloma cell line to generate hybridomas. Hybridomas which secreted a MAD that bound with high avidity to IL-IR1 were selected. The MADs inhibit IL-1 signalling by competing with IL-1 labeta and IL-1alpha binding to IL-IR. These MADs, as well as single chain antibodies single chain Fy antibodies, Fab antibodies, Fab' antibodies and (Pab')2 antibodies derived from them, are used in methods of treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human, monoclonal antibody; antibody; interleukin-1; receptor;

The present sequence is that of the light chain variable region of human anti-tumour necrosis factor (TNF) monoclonal antibody 9F7. This human TNF reactive IgG monoclonal antibody was generated by cloning variable and constant region DNA in vector DC4 and expression in CHO cells. The invention provides isolated human, primate, rodent, mammalian, chimeric, humanized and/or CDR-grafted anti-TNF antibodies, immunoglobulins, their cleavage products, other specified portions and variants, as well as anti-TNF antibody compositions, nucleic acids encoding these, vectors, host cells, methods for producing the antibodies using a host cell, transgenic animal or transgenic plant or plant cell, and therapeutic compositions, methods and devices. The antibody, nucleic acid, protein, composition and methods are useful for diagnosing or treating an anti-TNF related condition, e.g. cancer, anorexia, cachexia, or an immune, cardiovascular, infectious, and/or neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Tumour necrosis factor; TNF; immunotherapy; TNF related diseases; obesity; immune related disease; rheumatoid arthritis; cardiovascular disease; stroke; malignant disease; leuksemia; neurological disease; multiple solerosis; infection; hepatitis; anorectic; antiathritic; cerebroprotective; vasotropic; cytostatic; neuroprotective; antibacterial; antiinflammatory; hepatotropic; virucide;

The present invention relates to a mammalian anti-tumour necrosis factor (TNF) antibody capable of inhibiting binding of TNF alpha to TNF receptor. The invention is useful for diagnosing or treating an anti-TNF related condition in a cell, tissue, organ or animal and in immunotherapy. The invention is also useful for treating TNF related diseases chosen from obsesty, immune related diseases und as rheumatoid arthritis, cardiovascular disease such as stroke, malignant disease such as leukaemia, neurological disease such as stroke, malignant disease such as bacterial or viral infections such as hepatitis. The present sequence is the human 9FTLC light chain protein (variable region and J-region). This sequence is used in the exemplification of the invention.
                          Example 4; Fig 3; 45pp; English.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 8, Application US/09920267C

Sequence 8, Application WS/09920267C

Publication No. US2003004004A1

GENERAL INFORMATION:

APPLICANT: Giles-Komar, Jill

APPLICANT: Trikha, Mohit

APPLICANT: Trikha, Mohit

APPLICANT: Nakada, Marian

TITLE OF INVENTION: ANTI-DUAL INTEGRIN ANTIBODIES, COMPOSITINS, METHODS AND USES

FILE REFERENCE: CEN 249

CURRENT APPLICATION NUMBER: US/09/920,267C

CURRENT APPLICATION NUMBER: 60/223,363

PRIOR PILING DATE: 2000-08-07

NUMBER OF SEQ ID NOS: 17

SOFTWARE: Patentin version 3.1

SERQ ID NO 8

TENERAL SECOND NOS: 17

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                           US-09-920-137F-8

This Page Blank (u.s.)

Published_Applications Mucleic Acid and Published_Applications Amino Acid database searches now generate two sets of results each. The Published_Applications databases have been split into two parts to reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches.

Newly published applications will appear in the Published Applications May databases; older published

Searches run against Aucleic, Acid Published Applications produce two sets of results, with the extensions trapbm (Published Applications NA Mew).

Searches run against Amino Acid Published Applications produce two sets of results, with the extensions Searches run against Amino Acid Published Applications produce two sets of results, with the extensions are produced and applications AA Mew).

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
